MEDIA RELEASE  
For Immediate Release

### **E-HORS Fully Integrated Key Lock System**

E-Hors is proud to announce a new program which integrates E-Hors key locks with our hospitality solution, E-HORS (Electronic Hotel Operations and Reservation System). This new program, E-HORS's very own Key Lock program, is fully integrated with the Front Office module.

All key card management can be done directly from one program in E-HORS. There is no need for external servers or interfaces. Room night extension can be done automatically using E-HORS by employees without the need for guests to be present as the key lock management program will only restrict entry after the guest is checked out of the system.

Hotel security will be less vulnerable as front office operations will have a complete entry log of guests and employees who entered a specific room. It would be easy to track if a theft has happened in the hotel room.

When a key is lost, it can be revoked directly using E-HORS. The program also enables front office staffs to create and manage emergency keys, master keys and housekeeping keys with a time frame restriction.

As a one stop solution, E-Hors will also be supplying the electronic key locks solution. Our key locks use the latest technology, RFID (Radio Frequency Identification) which runs on a wireless online coordination.

The wireless key locks don't require cabling to every door unlike hardwired key locks. This reduces the need for manpower in case of system failure as every lock runs on its own sets of batteries.

E-Hors RFID key locks and its integrated Key Lock program will save hotel staffs a lot of hassle and time. Thus, more time can be used to deal with guests to ensure utmost satisfaction.
